1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: In the abstract, line 3 replace "said" with --the--.

Allowable Subject Matter

2. Claims 1-11 are allowed.

3. The following is an examiner's statement of reasons for allowance: The claimed apparatus (claim 1) and position control method (claim 9) that includes a specific pattern recorded in front of the load/unload zone located along a peripheral direction which when read controls movement of the head slider on position thereof and moves (avoids) the load/unload zone is neither taught by nor an obvious variation of the art of record. The claimed arrangement provides an arrangement that allows for increased data recording area of the disk while preventing injury to the load/unload zone and protect from a runaway magnetic head that is out of control due to the loss of a servo signal.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hirano et al. teaches unload a head only at specific regions of a disk. Suk et al. teaches an arrangement that increases data storage capacity of a disk by recovery portions of an unload zone for recording data, but does not teach the avoiding limitations of the present invention.
